1 Instruction Set Architecture ISA What does ISA define a The organization of the CPU b The physical implementation of the CPU c The set of instructions a CPU can execute d The memory management scheme Answer c The Instruction Set Architecture ISA defines the set of instructions that a CPU can execute along with their formats and operands Which of the following is NOT a characteristic of a RISC Reduced Instruction Set Computing architecture a Simple instructions b Fixedlength instructions c Large number of instructions d Pipelined execution Answer c RISC architectures prioritize simplicity and efficiency characterized by a limited set of instructions compared to CISC Complex Instruction Set Computing

2 CPU Components What is the primary function of the ALU Arithmetic Logic Unit a Store data b Perform arithmetic and logical operations 2 c Manage memory access d Control program flow Answer b The ALU is responsible for executing arithmetic addition subtraction etc and logical AND OR NOT operations Which component is responsible for fetching instructions from memory a ALU b Control Unit c Registers d Program Counter Answer d The Program Counter PC holds the address of the next instruction to be fetched from memory

3 Memory Organization What is the purpose of a cache memory a Store frequently used data for faster access b Manage the allocation of physical memory c Provide a large storage space for data d Implement virtual memory Answer a Cache memory acts as a temporary storage area for frequently accessed data enabling faster retrieval compared to accessing main memory Which memory addressing mode allows the address of the operand to be calculated using a base address and an offset a Register addressing b Immediate addressing c Direct addressing d Indexed addressing Answer d Indexed addressing utilizes a base address and an offset to calculate the actual memory address of the operand

4 Memory Hierarchy Which level of the memory hierarchy is typically the fastest but also the smallest a Main memory b Cache memory c Secondary storage 3 d Registers Answer d Registers are the fastest level in the memory hierarchy offering the quickest access times but with limited storage capacity What is the principle behind the concept of locality of reference a Data is accessed randomly b Data is accessed sequentially in a predictable pattern c Data is accessed in a blockbyblock manner d Data is accessed in a hierarchical order Answer b The principle of locality of reference states that programs tend to access data and instructions in a localized manner either spatially nearby addresses or temporally repeated access in a short time period

5 Pipelining and Parallelism What is the purpose of pipelining in CPU design

a Reduce the number of instructions executed b Increase the clock speed c Overlap the execution of multiple instructions d Implement a multicore processor Answer c

Pipelining allows multiple instructions to be processed simultaneously in different stages increasing the overall execution speed What type of parallelism involves splitting a task into smaller independent parts that can be executed concurrently on multiple processors a Instructionlevel parallelism b Datalevel parallelism c Threadlevel parallelism d All of the above Answer b Datalevel parallelism focuses on exploiting parallelism at the level of data operations typically by dividing a large dataset into smaller chunks that can be processed concurrently

6 InputOutput IO Which IO technique allows the CPU to perform other tasks while waiting for IO operations to complete a Programmed IO 4 b Interruptdriven IO c Direct memory access DMA d All of the above Answer b Interruptdriven IO allows the CPU to continue processing other tasks while an IO device handles the transfer of data What is the purpose of a device driver a Communicate with the user b Manage the communication between the CPU and an IO device c Store data for the IO device d Handle memory allocation Answer b A device driver acts as a software interface between the CPU and an IO device enabling communication and data transfer

7 Operating System and Memory Management What is the primary role of an operating system a Manage hardware resources b Provide a user interface c Execute applications d All of the above Answer d An operating system acts as the intermediary between the hardware and applications managing resources providing a user interface and executing applications Which memory management technique allows a process to be divided into smaller parts which can be loaded and executed in different memory locations a Swapping b Paging c Segmentation d Both b and c Answer d Both paging and segmentation allow a process to be broken down into smaller units enabling efficient memory management and multitasking Paging divides a process into fixedsize pages while segmentation divides it into logical units
